

Technical Data

ARTICLE INFO

The **installation bracket AP-MOUNT** was developed for all M-SHEV-AP and SHEV-AP housings. The installation brackets are pushed laterally onto the housing and are used to make wall mounting, maintenance and commissioning easier. The lid no longer needs to be placed on the floor or elsewhere, which could possibly scratch it, but is suspended from the hooks. The AP-MOUNT installation brackets can be permanently installed in the control panel or the service technician can use them individually if he has to remove the cover to access the control panel.
