SICO

ARTICLE INFO

SICO tokens are required to use the two parameterization software SICO LINK and SIMON LINK. With the token-based usage model, you have full cost control, because you only incur costs if you actually need the software. Since this happens in the environment of your projects, you have a better overview and can include the respective effort directly in your calculation. You can also use the SICO tokens to upgrade / book possible software functions on site in order to save yourself an exchange of hardware with additional travel costs. With SICO Token you get maximum flexibility for your warehouse and project calculations.

- Two tokens per year are required per connection set for the read function (checking, maintenance, etc.).
Depending on the time unit, tokens are required for the editing function (adjustment of parameters, etc.).
A number of tokens are required to upgrade functions
